

The One and Only Organic Waste Treatment and Processing Technology

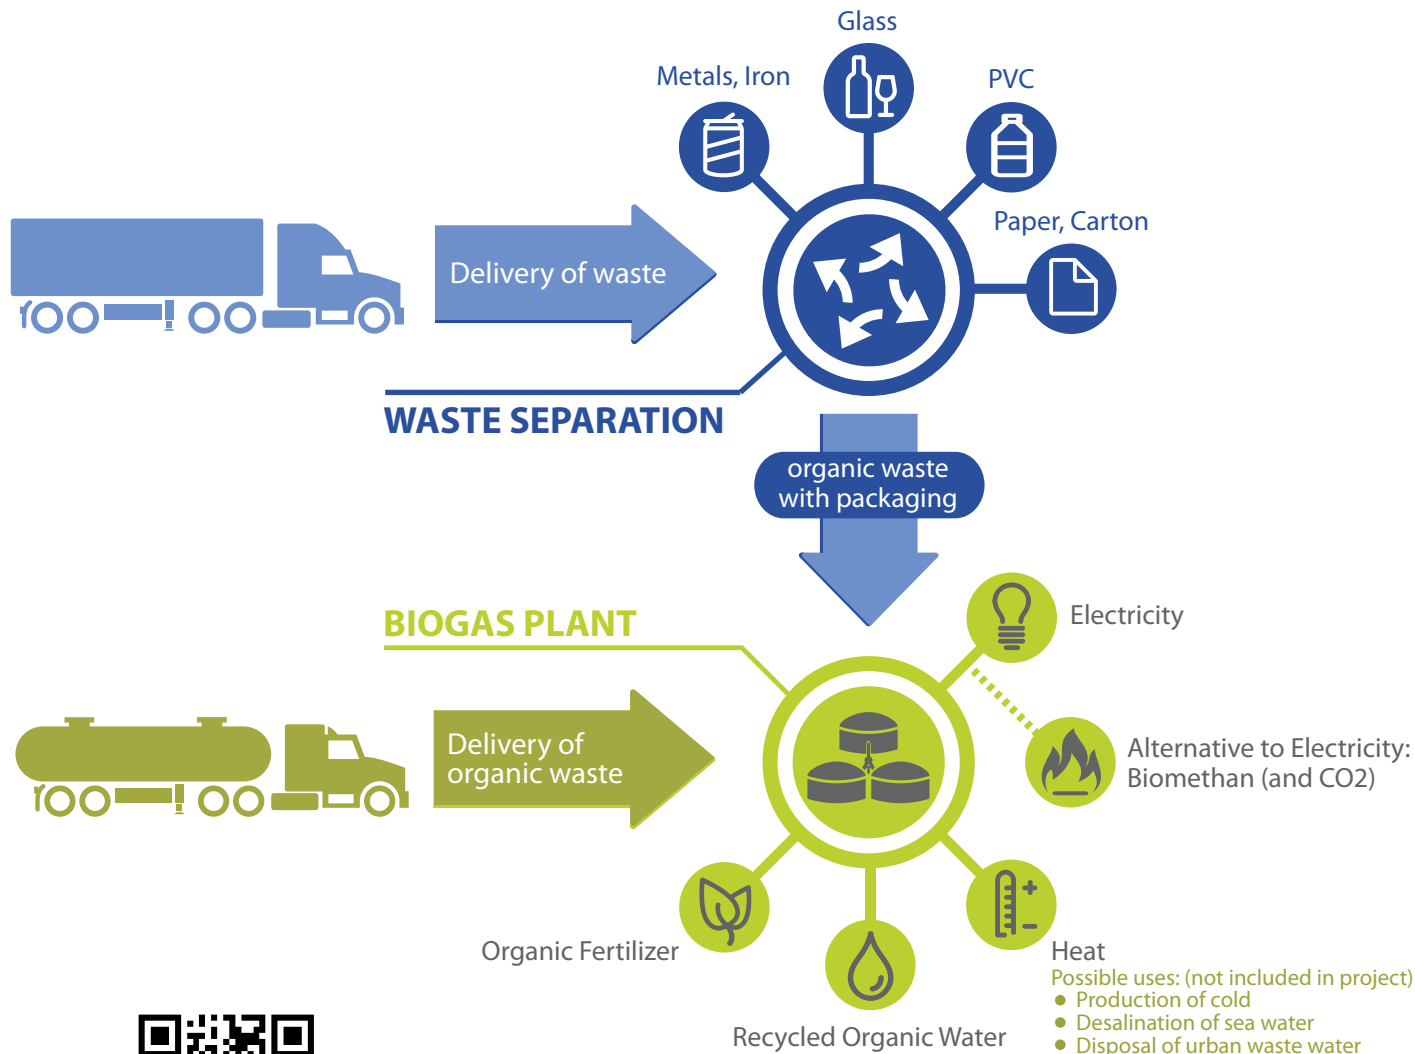

- Total elimination of organic waste
- No residues
- Only saleable products are created

There is no Plan "B" because we do not have a "Planet B"!

voran[®]

Convert your Waste to Money Trash to Cash!

You can watch our video „About the Biogas Plant“ here:
<https://www.youtube.com/watch?v=3B7t3060liw>

Return on Investment by Saleable Products:

- \$ Electricity
(alternatively to electricity also bio-methane of natural gas quality)
- \$ Organic Fertilizer
(legally registered as "ACTIVE LAND")
- \$ Recycled Organic Water
(permitted for irrigation, cleaning and construction purposes)
- \$ Heat and Steam
(often required in food production or, for example, seawater desalination)

Your advantage: All systems can be tailor-made exactly to what is most needed in the immediate environment!

Our Advantages

- We developed and build the really important machines ourselves!
- We keep the entire waste streams separate from each other, and thus always have the best recipe for the best gas yield available!
- The entire system runs parallelized, and therefore there is no plant stoppage or downtime!
- The system is modularized in a way that it can be enlarged even during operation so more saleable products can be created!
- We have been running our own plant for a decade without any interruption...not as a test pattern or prototype, but in everyday use with everything that belongs to it so we do know what we are talking about!
- Each system, no matter where it is located globally, is remote controlled via internet from our headquarter in Zwentendorf on a 24/7 basis so any technical activity is moderated in the unlikely event that support is required!

+	Electricity
+	Organic Fertilizer
+	Recycled Organic Water
+	Heat and Steam
-	Project Investment
=	PROFIT

FAQ

However important the proper handling of organic waste is - especially because an intact environment is much more important than we all want to realize - it is an uncomfortable work. You should at least reward yourself by taking as much profit in return out of it as you can!

Please contact us for a quotation

Only the following information is required from your end to start with:

- Planned location for the plant
- Amount of organic waste per month
- Desired saleable product(s)
 - \$ Electricity
 - \$ Organic Fertilizer
 - \$ Recycled Organic Water
 - \$ Heat and Steam

**WE ARE LOOKING FORWARD TO SERVE YOU AND YOUR ENVIRONMENT!
YOU CANNOT AFFORD TO GO WITHOUT US!**

About our Company

The companies in the voran® holding stand for quality, dynamics and professionalism, and have done for more than eight decades. Always at the leading edge, we continue to develop proven systems as well as pioneer new ways, where experience and expertise count.

With customer orientation, openness and innovative spirit, voran® Maschinen GmbH offers cost-effective overall solutions through our plant construction, facade, machinery and manufacturing companies. An integral part of the wide field of operations offered by voran® holding is for example Voran Immobilien und Beteiligungen GmbH with its subsidiary voran Projektinvest GmbH.

The successful Austrian construction firm Steiner Bau GmbH with its headquarters in Heiligeneich also contributes to the overall success of voran® holding with its large-scale building projects (hospitals, schools, housing projects, etc.).

The Viennese Projektinvest Bauträger GmbH on the other hand, is committed to perfection in furnishing the highest quality living spaces. On the subject of sustainable, realistic energy technology and recycling of biogenic waste, voran® holding has a visionary and future-oriented partner in EBK Reiter GmbH.
